HOOK

A tiny emergency. A fully equipped fire crew. A house that may not survive the rescue.

Players are called to solve simple emergencies, but physical tools, bad communication, overpowered hoses, destructible houses and panic can turn every rescue into a disaster.

The firefighters are often more dangerous than the fire.

Original screenshots from the game, enhanced with ChatGPT to show the target in-game graphics.

ELEVATOR PITCH

A crew that should help. Tools that fight back.

OPEN UP SIR! is a 2-4 player first-person physics comedy about an underprepared firefighting crew in a small Bavarian town. Players receive emergency calls, race to the scene in a shared firetruck, and solve incidents ranging from cats in trees to real house fires.

But every tool is physical and dangerous: hoses knock players down, ladders wobble, gas cylinders explode, walls break, and careless rescuing can cost more than the fire itself.

**The goal is not just to finish the call
- it is to keep the property alive.**

Original screenshots from the game, enhanced with ChatGPT to show the target in-game graphics.

USP

Physics chaos players can hear, feel and destroy.

Active ragdoll physics

Players stumble, collide, get knocked down and recover through physical motion.

Proximity voice chat

Communication becomes spatial, messy and funny when the crew spreads across the house.

Online co-op

2-4 players share the truck, tools, mistakes and mission payout in one live run.

Complete destructibility

Walls, furniture, doors and property become part of the score, not just decoration.

The rescue is a system collision: bodies, voices, tools and buildings all fight back.

CORE GAMEPLAY LOOP

Respond fast. Rescue badly. Pay for the damage.

Emergency call

Chaotic dispatch

Destructive rescue

Damage-based payout

Repair / refill / restock

Next call

The run continues while the team earns more than it spends. Bankruptcy ends the run.

CORE PILLARS

The conflict is the product.

01

Destructive Rescue Comedy

Every action can save the house - or destroy it.

02

Crew-Based Communication

Driver has the wheel. Navigator has the map.
Everyone has an opinion.

03

Physical Firefighting Tools

Hoses, ladders, axes, masks and trucks are powerful, clumsy and dangerous.

04

Run-Based Pressure

Players must not only extinguish the fire - they need to make the call profitable.

Original screenshots from the game, enhanced with ChatGPT to show the target in-game graphics.

MISSION EXAMPLE: HOUSE FIRE

One call branches into several ways to lose money.

CO-OP & VOICE CHAT

The team is split by information and responsibility.

Player 1: Driver**DURING DISPATCH**

Drives the truck, follows voice instructions, avoids traffic and property damage.

ON THE MISSION

Positions the truck, manages parking angle and keeps escape routes open.

Player 2: Navigator**DURING DISPATCH**

Reads the map, calls turns, chooses the fastest route.

ON THE MISSION

Tracks objectives, hazards and the shortest path through the building.

Player 3: Truck Operator**DURING DISPATCH**

Prepares hose, ladder, masks, axe and compartments.

ON THE MISSION

Controls water supply, pressure, hose length and refill timing.

Player 4: Breacher / Rescuer**DURING DISPATCH**

Plans entry tools and rescue gear before arrival.

ON THE MISSION

Opens doors, carries people or cat, disables hazards and finishes objectives.

Roles are not classes. They emerge from the chaos.

TOOLS & PHYSICAL CHAOS

Every tool solves one problem and creates another.

**Hose**

Pressure knocks players and objects around.

**Axe**

Opens fast routes but creates damage penalties.

**Ladder**

Enables rescue but requires positioning and coordination.

**Mask**

Protects from toxins but limits visibility.

**Lockpicks**

Avoid damage but are limited consumables.

**Gas hazards**

Can escalate into explosions.

SCORING & ECONOMY

The house is the score.

Final Reward = Base Reward + Speed Bonus + Rescue Bonus + Clean Work Bonus
- Late Penalty - Destruction Penalty - Resource Costs

Mission Success	Fire extinguished
Property Damage	-€1,850
Truck Damage	-€300
Late Penalty	-€100
Final Result	-€250

Players can succeed at the emergency and still lose money.

FIXED BUDGET / FUNDING GAP

€68K completes the mini-team and market test.

Budget structure

- Fixed full-game budget: €150K.
- FFF Bayern grant applied: €82K.
- Grant spending is Bavaria-only.
- Remaining external financing gap: €68K.

Mini-team use

- Additional mid-level Unity programmer.
- Mid-level artist for production assets.
- Level artist for mesh cutting and destruction prep.
- Player models from a trusted former colleague.

Market validation

- Approx. \$5K first Jester bait campaign.
- Approx. \$1K trailer creative for that campaign.
- Steam page, press, influencer and media beats.
- Additional specialist work paid through B2B.

TRAILER & STEAM PAGE

The pitch is already playable as a public-facing hook.

ART DIRECTION MOODBOARD

Cozy ambient, readable chaos.

The core visual references are Outbound, Peak and RV There Yet? They point toward warm exploration, soft readable lighting, stylized silhouettes and playful physical comedy.

Outbound

Peak

RV There Yet?

TARGET SHADER

cozy ambient + cell shading + black outline

Applying this shader pass lets even third-party assets land in one unified art style.

FAST-FOLLOWER SIGNAL ON STEAM

USP

FULL PHYSICS DESTRUCTION GAP

**Where can I buy this?**

2h ago

I need this with friends

3h ago

Wishlist?

4h ago

The TikTok account was removed after the concept was validated, but the early campaign already proved that the firefighter chaos hook is instantly readable.

A similar concept appearing on Steam is a market signal: the hook is strong enough for other teams to chase it.

MARKET POSITIONING

Positioned above fast-followers with full physics destruction.

**Embr**

Accessible co-op firefighting comedy.

**OPEN UP SIR!**

Physics-destruction co-op comedy where the rescue itself becomes the disaster.

**Firefighting Simulator**

Serious firefighting fantasy.

**Rescue Guys**

Fast-follower signal: similar chaos-rescue positioning, but without our full physics destruction USP.

TRACK RECORD: DREADWAY

April 2026 proof that lean co-op production can convert.

Dreadway · Apr 2026

- 45K Steam wishlists.
- \$55K gross revenue.
- Approx. 20M total views across social channels.
- Released co-op title with a lean production setup.

STEAMDB CAPSULE PREVIEW

DREADWAY

Previous co-op horror title shipped by the team, with publisher support joining late as marketing investment.

Why it matters

- Demonstrates Steam audience conversion from social attention.
- Shows the team can ship co-op multiplayer with limited budget.
- Validates the studio's ability to build community and wishlists.
- OPEN UP SIR! starts from a clearer hook and stronger USP.

FLEXIBLE PARTNERSHIP OPTIONS

Choose the structure that matches your role.

A · Passive investor

- Funds development and marketing budget.
- Costs recoup first: 70% investor / 30% developer.
- After recoup: 85% developer / 15% investor for 3 years.
- Developer keeps IP and production control.

B · Professional publisher

- Funds development only, around €35K or negotiated share.
- Owns marketing execution: Jester, trailer, Steam page, staged beats.
- Includes Keymailer, Lurkit and games media outreach, including IGN.
- Marketing is publisher contribution and is not recouped.

C · Hybrid / custom

- 1-2 passive investors plus a marketing-focused publisher is possible.
- Budget and upside split proportionally to actual contribution.
- Publisher counteroffers and alternative terms are welcome.
- Final percentages depend on negotiation and real contribution.

DEAL NOTES**IP**

remains with developer unless separately agreed

Ports

discussed separately or stay developer right

Recoup

applies to development funding, not publisher marketing

Terms

are illustrative and negotiable

PRODUCTION ROADMAP

MVP, market beat, Next Fest demo and September launch.

01

MVP · SEP 2026 - JAN 2027

Core prototype, mini-team production, first trailer, and first Jester/media beat prepared during MVP development.

02

PLAYTEST 1 · LATE FEB 2027

First closed player test after MVP, focused on co-op readability, destruction fun, mission pacing and tech risk.

03

STEAM NEXT FEST · JUN 2027

Public Steam demo prepared well in advance, with store page, trailer assets and wishlist funnel already warmed up.

04

PLAYTEST 2 · JUL 2027

Closed test for games media and influencers, supported by press outreach, Keymailer, Lurkit and follow-up campaign beats.

05

EA / RELEASE · SEP 2027

Early Access or release target with launch trailer, campaign wrap, influencer push and post-launch production plan.
