HOOK

A tiny emergency. A fully equipped fire crew. A house that may not survive the rescue.

Players are called to solve simple emergencies, but physical tools, bad communication, overpowered hoses, destructible houses and panic can turn every rescue into a disaster.

The firefighters are often more dangerous than the fire.

ELEVATOR PITCH

A crew that should help. Tools that fight back.

OPEN UP SIR! is a 2-4 player first-person physics comedy about an underprepared firefighting crew in a small Bavarian town. Players receive emergency calls, race to the scene in a shared firetruck, and solve incidents ranging from cats in trees to real house fires.

But every tool is physical and dangerous: hoses knock players down, ladders wobble, gas cylinders explode, walls break, and careless rescuing can cost more than the fire itself.

**The goal is not just to finish the call
- it is to keep the property alive.**

USP

Physics chaos players can hear, feel and destroy.

Active ragdoll physics

Players stumble, collide, get knocked down and recover through physical motion.

Proximity voice chat

Communication becomes spatial, messy and funny when the crew spreads across the house.

Online co-op

2-4 players share the truck, tools, mistakes and mission payout in one live run.

Complete destructibility

Walls, furniture, doors and property become part of the score, not just decoration.

The rescue is a system collision: bodies, voices, tools and buildings all fight back.

CORE GAMEPLAY LOOP

Respond fast. Rescue badly. Pay for the damage.

Emergency call

Chaotic dispatch

Destructive rescue

Damage-based payout

Repair / refill / restock

Next call

The run continues while the team earns more than it spends. Bankruptcy ends the run.

CORE PILLARS

The conflict is the product.

01

Destructive Rescue Comedy

Every action can save the house - or destroy it.

02

Crew-Based Communication

Driver has the wheel. Navigator has the map.
Everyone has an opinion.

03

Physical Firefighting Tools

Hoses, ladders, axes, masks and trucks are powerful, clumsy and dangerous.

04

Run-Based Pressure

Players must not only extinguish the fire - they need to make the call profitable.

MISSION EXAMPLE: HOUSE FIRE

One call branches into several ways to lose money.

CO-OP & VOICE CHAT

The team is split by information and responsibility.

Player 1: Driver

DURING DISPATCH

Drives the truck, follows voice instructions, avoids traffic and property damage.

ON THE MISSION

Positions the truck, manages parking angle and keeps escape routes open.

Player 2: Navigator

DURING DISPATCH

Reads the map, calls turns, chooses the fastest route.

ON THE MISSION

Tracks objectives, hazards and the shortest path through the building.

Player 3: Truck Operator

DURING DISPATCH

Prepares hose, ladder, masks, axe and compartments.

ON THE MISSION

Controls water supply, pressure, hose length and refill timing.

Player 4: Breacher / Rescuer

DURING DISPATCH

Plans entry tools and rescue gear before arrival.

ON THE MISSION

Opens doors, carries people or cat, disables hazards and finishes objectives.

Original screenshots from the game, enhanced with ChatGPT to show the target in-game graphics.

Roles are not classes. They emerge from the chaos.

TOOLS & PHYSICAL CHAOS

Every tool solves one problem and creates another.

Hose

Pressure knocks players and objects around.

Axe

Opens fast routes but creates damage penalties.

Ladder

Enables rescue but requires positioning and coordination.

Mask

Protects from toxins but limits visibility.

Lockpicks

Avoid damage but are limited consumables.

Gas hazards

Can escalate into explosions.

SCORING & ECONOMY

The house is the score.

Final Reward = Base Reward + Speed Bonus + Rescue Bonus + Clean Work Bonus
- Late Penalty - Destruction Penalty - Resource Costs

Mission Success	Fire extinguished
Property Damage	-€1,850
Truck Damage	-€300
Late Penalty	-€100
Final Result	-€250

Players can succeed at the emergency and still lose money.

MVP / VERTICAL SLICE

Vertical Slice Scope

Playable slice

- 2-4 player host-client co-op.
- 1 compact Bavarian district.
- 1 street with destructible houses.
- Bavarian firefighter uniforms.
- Bavarian firetruck identity.
- 1 firetruck with driving, ladder, hose, water and fuel.

3 MVP missions

- Cat rescue.
- Sensor replacement / false alarm.
- House fire.

Core systems

- hose physics;
- destruction;
- mask / toxins / knockdown;
- axe;
- lockpicks;
- mission management;
- post-mission economy;
- bankruptcy run loop.

TRAILER & STEAM PAGE

The pitch is already playable as a public- facing hook.

ART DIRECTION MOODBOARD

Cozy ambient, readable chaos.

The core visual references are Outbound, Peak and RV There Yet? They point toward warm exploration, soft readable lighting, stylized silhouettes and playful physical comedy.

Outbound

Peak

RV There Yet?

TARGET SHADER

cozy ambient + cell shading + black outline

Applying this shader pass lets even third-party assets land in one unified art style.

MARKET CHECK

Players understood the joke before the game existed.

INTENT SIGNAL

Where can I buy this?

2h ago

I need this with friends

3h ago

Wishlist?

4h ago

Short concept posts gained multi-million organic reach and repeated buying-intent comments.

The hook is instantly readable: the rescue becoming the disaster is the shareable moment.

MARKET POSITIONING

Positioned between co-op chaos and firefighting fantasy.

Embr

Accessible co-op firefighting comedy.

OPEN UP SIR!

Physics-destruction co-op comedy where the rescue itself becomes the disaster.

Firefighting Simulator

Serious firefighting fantasy.

TRACK RECORD: DREADWAY

Lean co-op production already shipped once.

ZweiBeir Indie

Aleksandr Varko

Founder / game director / programmer. 7 years Unity development and co-op multiplayer experience.

Daria Varko

Artist. Art and visual support for the game's playable identity.

STEAMDB CAPSULE PREVIEW

DREADWAY

Previous co-op horror title shipped by the team, with publisher support joining late as marketing investment.

Use of funds

- core gameplay implementation;
- networking and physics polish;
- custom player/firetruck models;
- 3 MVP missions;
- trailer, Steam assets, capsules;
- QA/playtests;
- EA preparation.

ROADMAP

Roadmap to MVP, demo, playtests and Early Access.

01

MVP · SEP 2026 - JAN 2027

1 fire mission, hand-crafted street, hose + water, destructible houses, navigator map, gas hazards.

02

PLAYTEST 1

Mission tracking, knockdowns, evacuation, main menu, tutorial draft, feedback loop.

03

DEMO

3 missions, trailer, Steam page, sound design, economy, replenishment, truck upgrades.

04

PLAYTEST 2

Critical bug pass, player feedback, NPC fire reports, tool shop, polish improvements.

05

EA / RELEASE

90% bug fixes, 3 more missions, 2 more streets, station activities, settings, launch trailer.
